Natural Gas Keeps Gains After Small Supply Increase

Natural gas prices kept gains Thursday as a government report showed a smaller-than-anticipated increase in natural gas in storages. Natural gas for September delivery rose 12 cents, or 2.3%, to \$4.83 per million British thermal units, roughly where it was before the report. The Energy Information Administration reported an increase of 28 billion cubic feet to natural gas inventories for the week ended July 23. Analysts had expected an injection of 31 to 35 Bcf. The increase compares to a 70 Bcf build in the same week of 2009 and the five-year-average of 50 Bcf. Temperatures were high across the country last week, making it the hottest week in terms of cooling demand since 2006. Persistent heat forecast in the coming weeks could keep injections below those in recent years as a number of power plants use natural gas to produce electricity for air

conditioning and refrigeration. The 2010 Atlantic hurricane season has generated just two named storms, only one of which was a hurricane. The season typically becomes much more active in August and peaks in mid-September, by which time the average is seven named storms and

four hurricanes, two of which are major. Major storms have historically boosted the cost of wholesale power. Patriot Energy Group encourages all clients to assess their exposure to energy

markets to determine if now is an opportune time to extend contracts or develop forward looking strategies given unique business circumstances. Regardless of one's view on whether energy prices will rise or fall, all should determine if there is an opportunity to save money to mitigate risk. BP Drilling Ban Would Cost U.S. Jobs, Company Says

BP Plc objected to proposed legislation that would bar the oil company from operating new drilling leases in U.S. waters, saying it could trigger job losses and threaten the nation's energy security. A provision of the House bill may have a "drastic impact," David Nagel, executive vice president of BP America, said in a July 28 letter to Democratic Speaker Nancy Pelosi of California and Republican Minority Leader John Boehner of Ohio. House and Senate leaders presented legislation July 27 imposing tougher offshore drilling rules after the BP spill in the Gulf of Mexico, the worst in U.S. history. The House measure strengthening safety and environmental standards would also bar BP from new leases, based on its safety record. BP said it contributes "significantly" to U.S. oil output as the largest producer in the deep waters of the Gulf. "If this provision were to limit our ability to develop new and existing energy

sources, it would harm the ongoing effort to increase America's energy independence," Nagel wrote. Congressional Democrats said the bill is necessary in response to the spill, which was caused by an April 20 explosion on the Deepwater Horizon drilling rig leased by London-based BP. The House and Senate may take up their oil-spill proposals before members leave for their August recess. The ban would be based on the company's cumulative safety record. BP "has a flagrant history of taking risks to boost profits that has resulted in deaths of workers, destruction of the environment and economic chaos in local communities," Miller said in a statement when he introduced his proposal on June 30. While BP supports stronger drilling regulation, it is concerned that the provision in the House measure "could have profound consequences for the Gulf Coast economy and jobs, and for the nation as a whole," Nagel said in the letter.

EIA - Weekly Natural Gas Storage Report

Summary

Working gas in storage was 2,919 Bcf as of Friday, July 23, 2010, according to EIA estimates. This represents a net increase of 28 Bcf from the previous week. Stocks were 94 Bcf less than last year at this time and 239 Bcf above the 5-year average of 2,680 Bcf. In the East Region, stocks were 25 Bcf above the 5-year average following net injections of 34 Bcf. Stocks in the Producing Region were 126 Bcf above the 5-year average of 861 Bcf after a net withdrawal of 5 Bcf. Stocks in the West Region were 88 Bcf above the 5-year average after a net drawdown of 1 Bcf. At 2,919 Bcf, total working gas is within the 5-year historical range.
